

IN THE SPECIFICATION

Please delete the extant Sequence Listing and substitute the enclosed paper copy of the Sequence Listing therefor.

On page 5, lines 28-34, please change

The term "PAP-II protein" is meant to include the 310 amino acid "immature" wild-type polypeptide disclosed in Poyet, et al., FEBS letters 347:268-272 (1994) and the 285-amino acid polypeptide containing amino acid residues 26-310 of the immature polypeptide (i.e. "PAP II (1-285)" or "mature PAP II" that excludes the N-terminal twenty-five-amino acid signal sequence). The nucleotide sequence and corresponding amino acid sequence of immature wild-type PAP II are set forth in Table 2. They are denoted as SEQ ID NOS:3 and 4 respectively (wherein the 25-amino acid signal sequence is shown using negative numbering). The nucleotide sequence and corresponding amino acid sequence of mature wild-type PAP II are denoted as SEQ ID NOS:20 and 21 respectively.
